NEXT GENERATION of USB CHARGERS

Next generation USB chargers are designed for charging more than just cellphones but also tablets, e-readers, and laptops amongst other electronic devices. Typical applications include on/off-highway equipment, trucks, cars, golf carts, lawn and garden equipment, marine, and military. When you have similar components, identifying the right one for your needs can be tricky.

- The main difference between these USB chargers is going to be the amperage which is important for police fleets and other commercial vehicles where USB charging is essential.
- Ease of front panel installation
- Most chargers are sealed with a water resistant cap to keep dust and water out of dual USB ports.
- The **Carling Dual USB V-Charger** (11018) and the **A13-208 Dual USB Power Charger** (11019) are compatible with Carling Technologies VMS-01 Mounting Bracket
- 11017 & 11018 provide self closing doors
